

CLAIMS

1-15 (Cancelled)

16. (currently amended) A toner for developing an electrostatically charged copier or printer image, the toner consisting essentially of:

- a) a binder resin;
- b) a colorant which is carbon black, diazo yellow, phthalocyanine blue, quinacridone, carmine 6B, monoazo red or perylene; and
- c) a charge control agent,

wherein the binder resin includes a polyolefin resin having a cyclic structure, wherein the polyolefin resin is a copolymer derived from an alpha-olefin, an alicyclic compound having one double bond and, optionally, a diene monomer, and wherein the electrostatically charged copier or printer image is fixed by the action of a heated roller and said polyolefin resin has a cyclic structure further comprising a carboxyl group is cross-linked by metal ions or dienes.

Claims 17-20 cancelled.

21. (Previously presented) The toner according to claim 16, wherein the alpha olefin, from which the copolymer is derived, is ethylene.

22-23. (Cancelled)

24. (Previously presented) The toner according to claim 16, wherein the polyolefin resin having a cyclic structure comprises at least one functional group selected

from the group consisting of a carboxyl group, a hydroxyl group and an amino group.

25 -34. (Cancelled)

35. (Previously presented) The toner according to claim 16, wherein the binder resin consists of 1 to 100 parts by weight of said polyolefin resin with a cyclic structure and 0 to 99 parts by weight of at least one resin selected from the group consisting of polyester resins, vinyl acetate resins, vinyl acetate copolymer resins and styrene-acrylate resins.
